

# Compatibility

The update of this list is a manual process and depends on feedback of the community and users (you!).

We're glad to hear from platforms known to work or not to work currently, so feel free to drop a note in the [Kopano Forum](#).

## Legend:

- functional | not available | partially | unknown
- **EM** (E-Mail) | **CO** (Contacts) | **CA** (Calendar) | **TA** (Tasks) | **NO** (Notes) | **GAB** (Global Address Book) | **F/B** Free-Busy Lookup
- **SFP** SubFolder Push | **RC** Recurring Calendar | **MF** Multiple Folders | **MR** Meeting requests (INVite, RESPonse) | **N/A** Not available
- **+++** Excellent | **++** Good | **+** Reasonable | **o** Limited
- **Lines in gray** are really old clients (5 years or older) which are not being tested and where we don't get user feedback anymore. For completeness they are in the list, but shouldn't be used anymore.

| Level | Platform | Client  | General                | Wipe               | SFP            | RC | MF    | MR            | Type          | Best with | Comment  |
|-------|----------|---|------------------------|--------------------|----------------|----|-------|---------------|---------------|-----------|--|
| +++   |          | Windows Mobile 5-6.5  | EM CA CO TA            | Full ROM           |                |    |       | INV RESP      | Native        | 1.5       |  |

<sup>1</sup> Only one contact folder is displayed in Outlook.

<sup>2</sup> Not all recurrency patterns supported. Functionality like "All future events" cause the ending of the current and the creation of a new recurrent appointment.

<sup>3</sup> Multiple folders are supported, but it's not always clearly differentiate in which folder an object lives.

#### **About the "Best with" Z-Push version**

For many (especially old clients) we don't get feedback from users anymore. The "best with" information marks the point where we got feedback that this client would be working. This doesn't mean it won't work with newer or even the latest version, but we just don't know.

If you are still using such a client, please send us your feedback.

#### **Apple Mac Mail and the Exchange Server option**

Please be aware that Apple uses Exchange Webservices (EWS) and not Exchange ActiveSync (EAS) for it's connection and is therefore not compatible with Z-Push.
